Rahul Makwana

Senior Software Engineer & AI Builder

(512) 822-8867 r.makwana92@gmail.com St. Louis https://rahul-portfolio-neon.vercel.app

Summary

AI-First Senior Software Engineer with 9+ years of experience shipping code, leading teams, and orchestrating AI-driven development workflows. Built and shipped 5+ AI products, reduced operating costs by 43%, and pioneered hybrid engineering models where human developers and AI agents share the same ticket board, PR workflow, and code review pipeline.

Experience

Tellen

Founding Fullstack AI Engineer — Jan 2025 - present

- Operated as a founding engineer multiplied by AI — orchestrating Cursor agents, Claude Code, and automated pipelines to match the output of a traditional 15+ person engineering team
- Architected and built an AI-driven development workflow connecting business requests, Linear ticket creation, AI-assisted implementation, PR generation, preview environments, CodeRabbit review, and GitHub CI/CD validation before deployment
- Shipped production-ready AI products in weeks that typically take months — FootNoteAI, Workpaper AI, ChatBot, and audit automation tools — by embedding AI into every stage of the development lifecycle
- Pioneered a hybrid engineering model where human developers and AI agents share the same ticket board, PR workflow, and code review pipeline — achieving deterministic results through temperature tuning, human-in-the-loop checkpoints, and controlled IDE environments
- Helped evolve Tellen's platform from a simple App Service deployment to a scalable Docker/Kubernetes-based architecture
- Led delivery of AI products that converted trial client engagements into longer-term contracts, directly impacting company revenue in a startup environment

Antylia Scientific

Senior Developer & AI/ML Lead — May 2021 - Dec 2024

- Promoted to Senior Developer and AI/ML Lead, driving AI adoption across the engineering organization
- Built recommendation engines and predictive models using TensorFlow, PyTorch, and Scikit-learn for product optimization and customer segmentation
- Developed Azure-based chatbot workflows using Azure Cognitive Services and Bot Framework
- Led R&D initiatives in CNNs, R-CNN object detection, ARIMA forecasting, and event-driven cloud architecture
- Implemented NLP pipelines for document intelligence, text extraction, and sentiment analysis using Azure Document Intelligence and NLTK
- Deployed ML models to Azure ML Studio with automated retraining, monitoring, and A/B testing

Antylia Scientific

Software Developer — May 2016 - May 2021

- Built calibration systems and IoT services using Azure IoT Hub and Azure Functions that automated laboratory workflows end to end
- Cut operating costs by 43% through process automation and digital transformation of legacy paper-based systems
- Eliminated paper-based workflows by developing comprehensive digital solutions for calibration tracking and compliance
- Developed and maintained enterprise applications using C#, .NET, and SQL Server serving hundreds of internal users
- Designed RESTful APIs and microservices architecture for internal tooling and cross-team integrations

Core Expertise

AI Product Development
AI-Assisted Development
Financial Reporting Workflows
Azure Cloud Services
Industrial Software Engineering
Data Analytics
Product Development
Forecasting Analytics
Workflow Automation
Project Management
Calibration Accreditations

Tech Stack

Python, TypeScript, C#, SQL, Next.js, React, Node.js, FastAPI, LLMs, OpenAI, LangChain, RAG, NLP, Azure Document Intelligence, Docker, Kubernetes, Git, CI/CD, Cursor, Claude Code

Education

Post Grad Program - AI and Machine Learning
UT Austin
Jan 2022 - Jan 2023

Masters - Computer Science
Texas State University
Jan 2013 - Jan 2015
